

Understanding of industry and needs with specialized experience in financial institutions

Increased accuracy calculating FTP, for better understanding of profit contributions

Leverage more accurate cash flow rates for detailed budget insights

United Nations Federal Credit Union Strengthens Existing Capabilities with Axiom Software

UNFCU is a \$4.2 billion credit union that offers a wide range of savings, consumer loan, mortgage and investment products and services to the United Nations community. UNFCU is headquartered in New York City with branches in the United States and representative offices in Austria, Kenya, Rome and Switzerland.

UNFCU wanted to leverage a Microsoft Excel®-based solution, and unlike other providers, Axiom Software's solutions embrace the familiarity of Excel while expanding on some of its capabilities. UNFCU selected Axiom Software's Funds Transfer Pricing, Budgeting and Forecasting, and Reporting and Analytics solutions in addition to Profitability Management, which are all provided to the credit union within a comprehensive platform.

"Axiom specializes in financial institutions, so they understand our industry and our needs," said Donald Roe, Senior Vice President of Finance for United Nations Federal Credit Union (UNFCU). "Axiom provides detailed insight that allows us to more accurately calculate FTP and cash flow rates," added Mr. Roe. "With Axiom, UNFCU can also leverage FTP results to better understand profit contributions for budgets and actual results."
